TO PLACE YOUR ORDER: Bring order by our office or mail it to NC Cooperative Extension, 193 Thomas Heights Rd., Franklin, NC 28734. This is a fundraiser and **there is no guarantee on plants. Pre-payment is necessary on all orders.** All orders should be in our office by March 16, 2018. Pick up will be April 4-5<sup>th</sup>. All proceeds from this sale will go to Macon County 4-H. If you have any questions, please call our office at 349-2046.

**Apples:** Apples like rich, fertile, loamy soil with good drainage. Can be grown in sandy or clay soil as long as good drainage. Full sun. Apples need to pollinate with another variety to ensure good crop set. Plant standard set: 25'-30' apart. Bears in 3-4 years. Pollinators marked below. For correct pollination order varieties with the same pollination code.

**Arkansas Black** – Ripens in late season. Firm, crisp and extra juicy. Flesh is yellow. Dark red to black skin and keeps very good. A heavy bearer. Tart, good cooking and eating apple. Good Keeper. Pollination Code C.

**Old-timey Horse Apple** – This apple tree is a pollinator. The Horse apple is a medium sized fruit – the original old-timey apple that everyone still loves. Great for cooking and baking. An excellent late apple to wrap and keep for winter. The Horse apple is very tart until fully ripe. Ripens late July. Pollination Code: B

**Mutzu or Crispin** – Large, round yellow skin with crisp, crunchy white flesh. Very tart and juicy. Great for desserts. Bears early and is a heavy producer. Keeps well. This variety is pollen sterile and cannot pollinate other apple trees.

**Pink Lady** – Blushing pink skin over green flesh. The Pink Lady is a large apple with a snappy tartness with crisp, sweet flavor. Harvest is late September. Flesh resists browning when cut, great for fresh eating with a long storage life. Can be pollinated by Red Delicious or Honey Crisp

**Red Delicious** – a large red apple with pure white flesh; crisp and juicy when picked fresh. Good for fresh eating and baking. This apple tree ripens September to October. Red Delicious is a great pollinator for other apples. A staples for any orchard.

**Stamen Winesap** – Large, juicy, moderately tart wine-like flavor. Bright red skin. Firm, crisp flesh. Ripens mid season. Good for cooking or eating fresh. This variety is pollen sterile and cannot pollinate other apple trees. Pollination Code C.

**Yates** – Pollinator. Small apple. An old time favorite. Very firm, dotted, bright red skin. Firm, juicy, aromatic red tinged flesh with excellent taste. A heavy bearer. Excellent pollinator for most apples. Easy to grow and a favorite for wildlife if you want to share... Ripens mid-October. Pollination Code B

**Yellow Delicious** – The apple is a Large, long time favorite. The Yellow Delicious has golden yellow skin with a crisp delicious flesh. A very high quality apple for all purposes. The Yellow Delicious is a excellent pollinator for most apples. Ripens September through October. Serves as a great pollinator.

**Cherry Trees:** Plant in full sun with well drained soil. Plant 25' apart. Tart cherries are self-fruitful but sweet cherries require crosspollination. Cherry's ripen mid June – July.

**Compact Stella** – This cherry is a must for the home gardener with limited space. This semi-dwarf (10-12 ft) cherry tree produces large dark-red fruit that is firm, sweet and resistant to cracking. This tree is self fertile and a good pollinator for other cherry varieties.

**Black Tartarian (sweet)** – The best sweet cherry available. Blackish red in color, good size, sweet, juicy and rich. Excellent for fresh eating and pies. Ripens very early. Bears at early age. Needs pollinator.

**Bada Bing Cherry** – an excellent cherry with dark red skin and purplish red flesh. The fruit is very firm and sweet. This self-fertile variety is resistant to cracking and serves as a good pollinator for other sweet cherries. Bada Bing ripens in late June.

**Blackberries:** Should be planted 3-5 ft apart in full sun. Trailing varieties need spacing of 8-10 ft between plants and trellised. Bears 2-3 years. Fruit yield 2-4 quarts per vine.

**Prime Ark® Freedom** – thornless ever-bearing blackberry. This type of berry fruits half of it's crop in the fall and half the next spring. It has very large fruit with excellent flavor. Freedom is a great choice for local home gardens.

**Von** – Von is the first thornless blackberry released from NC State University. Von has exceptional qualities such as very high yields of fruit. The fruiting season is mid to late season. Von has large uniform fruit and great sweet fruit quality that is sweet and a favorite to many. One of the favorite qualities of Von is its small seed size.

**Blueberries:** **\*\*Need at least 2 varieties to pollinate\*\*** Full sun in well-drained soil does best. Plant 3-5' apart. Begin fertilizing in April with azalea food.

**Brightwell:** – Early season berry with average fruit size. Very firm. Plants grow upright and open. Berries are light blue with excellent quality and flavor. Yields are high. Pollinate with Tiftblue or Climax. Ripens mid-June.

**Powderblue** – A mid to late season rabbiteye cultivar with an upright growth habit. Cross pollinate with two other blueberry varieties for maximum fruit yields. The Powderblue Blueberry plant flowers in late spring to early summer, it is less susceptible to late winter or early spring freezes.

**Titan** – Produces super large berries June – July. This super large berry needs another Rabbit-Eye variety for pollination. This is currently the largest berry available.

**Grapes:** Requires full sun. Plant vines 4-8 inches deep. After growth starts, select strongest shoot and let grow pruning of remaining branches. Bears in 2-3 years.

**Reliance (red)** - Reliance is a great addition to your home garden. This pink seedless grape is one of the most cold hardy varieties of all the seedless grapes. It produces very large clusters of medium size berries with tender skin and sweet flavor. This variety is very highly rated.

**Jupiter** - An excellent reddish blue seedless grapevine that produce fruit with a flavor of muscat. As the grapes fully ripens it will turn completely blue. The grapevine produce grapes that are very large and is semi-crisp. This fruit is used primarily as a table grape

**Raspberries:** Should be planted 3-5 ft. apart in full sun. Trailing varieties need spacing of 8-10 ft. between plants and trellised. Bears in 2-3 years.

**Double Gold Raspberry** - a unique deeply blushed, with beautiful golden champagne-colored fruit with a distinctive conical shape. It gets the name from the fact that it produces two harvests per season. The first year of planting, Double Gold will produce its first crop in the fall on the tips of the current years cane. A second crop will develop further down those same canes the following summer. So floricanne berries ripen in July and primocane berries ripen in mid September through frost. Self-Pollinating

**Anne** - Golden yellow fall bearing variety. Pairs wonderfully with Heritage. Its excellent size, appearance and sweet flavor make it a great choice for a fall bearing golden raspberry.

**The Nantahala** - a new release from NC State University is upright thorny variety that produces dark red berries that are long and wide. The seeds in the berries are smaller than most other raspberries. Berries ripen very late helping to extend your fruit season. The late ripening also helps avoid sun scald and heat damage.

**Strawberries:** Need well drained, fertile soil in full sun. Set plants two foot apart in rows with crown just above soil line. Pinch off blooms first year.

**Sweet Charlie** - Produces a large sweet berry that taste like it has sugar on them fresh from the field. Ripens in June

**Ozark Beauty**- Produces large, firm, wedge shaped berries -bright red inside and out. Excellent for fresh eating, canning, freezing and preserves. Thrives in any soil, even sand. Recommended for home gardens in the North and for southern mountain areas. Resistant to leaf spot and leaf scorch.

**Pear:** Grows and produces best in well-drained sandy-loamy soil. Will also grow in clay soil, light sandy soil or dry soil with irrigation. Don't over fertilize. Pear trees can promote fireblight. Full sun. Plant 25- 35 feet apart. Requires cross pollination from a different variety. Bears in 2-3 years.

Seckel - sweet as sugar, this pear tree has pears with medium yellow russetted skin and exceptional flavor. Fruit is smooth and extremely sweet and very juicy. - has a distinctive, spicy, rich, aromatic flavor. Self fruitful pear tree, but bears more if a second variety pear tree is planted. Ripens late September.

**Moonglow** - a great tree to pair with other pears that need a pollinator. It is a large pear with brownish-green skin. The Moonglow pear's soft, juicy flesh is nearly free of grit and has a sweet mild flavor.

**Peaches:** Plant in full sun about 16-20 apart. Self-pollinating and begin bearing in approximately 2-3 years. Annual pruning will help to maintain vigor since fruit bears on previous years growth. Thinning is required to ensure maximum fruit size and quality.

**Red Haven** - a great all purpose peach with medium to large size fruit. Red Haven is easy to grow with little maintenance producing heavy crops each year. Blooms later than other peaches and ripens late July.

#### **Plums:**

**Ozark Premier** - Large red skin, freestone plum. The flesh of this plum is yellow, juicy and tart. It is a very good plum that ripens in mid-June. Claims to be the best tasting plum available. OP yield is better with a pollinator.

~~~~~
